## Skills

---

- PHP | Laravel | Livewire | CodeIgniter | Wordpress | JavaScript | jQuery | React | MySQL | TailwindCSS | Git
- GNU/Linux | Vim | Bash | Nginx | Apache | CI/CD | PHPUnit | MVC | OOP | API Development
- Microservices | Frontend | Backend | OWASP Security Principles | Photoshop

## Experience

---

- |  |                               |                                 |                          |
|--|-------------------------------|---------------------------------|--------------------------|
| <b>Full Stack Developer</b>  | <b><u>Freelance</u></b>       | <i>Remote, USA</i>              | <b>01/2023 - present</b> |
| <ul style="list-style-type: none"><li>• Streamlined the development process by integrating React and Laravel to deliver a fully functional, scalable web application in record time, resulting in increased productivity and reduced development costs</li><li>• Developed a custom content management system using Laravel and React that improved the content creation process and resulted in a 50% reduction in the time required to publish new content</li><li>• Implemented a custom e-commerce platform for a retail client that included features such as product catalog management, inventory tracking, and payment processing. The platform was built using Laravel for the backend, Wordpress/WooCommerce and integrated with payment gateways</li></ul>  |                               |                                 |                          |
| <b>Senior Backend Engineer</b>   | <b><u>Ideal Image</u></b>     | <i>Remote, FL, USA</i>          | <b>10/2021 - 12/2022</b> |
| <ul style="list-style-type: none"><li>• Implemented scalable RESTful APIs and background workers for managing asynchronous modules in a microservices oriented application</li><li>• Collaborated with cross-functional teams to develop and implement a robust authentication and authorization system using React and Laravel, resulting in increased security and trust in the application</li><li>• Developed and maintained APIs using Laravel, enabling seamless integration with external services and data sources</li><li>• Utilized Git for version control, ensuring code stability and facilitating collaboration with other developers</li><li>• Developed optimized SQL queries and database schemas to improve query performance and data access times</li></ul>  |                               |                                 |                          |
| <b>Full Stack Developer</b>  | <b><u>NIA Auto Design</u></b> | <i>Miami, FL, USA</i>           | <b>8/2020 - 10/2021</b>  |
| <ul style="list-style-type: none"><li>• Improved the maintainability and scalability of a Laravel web application by refactoring the codebase and implementing modern software design patterns, resulting in increased efficiency and reduced technical debt</li><li>• Automated and optimized business logic for core E-commerce operations in areas such as customer operations, producing invoices, checking and modifying store inventory</li><li>• Employed Tailwind CSS to streamline front-end development workflows and create mobile-friendly, intuitive user interfaces</li><li>• Managed E-commerce projects, implementing payment gateways and shopping cart functionality using popular platforms such as WooCommerce and Shopify</li><li>• Server automation/backups with Python/Bash, applied security patches on a regular basis</li><li>• Deployed web applications on Linux servers, ensuring optimal performance and security</li></ul> |                               |                                 |                          |
| <b>Full Stack Developer</b>  | <b><u>C&amp;I Studios</u></b> | <i>Fort Lauderdale, FL, USA</i> | <b>06/2018 - 07/2020</b> |
| <ul style="list-style-type: none"><li>• Designed and developed custom web applications using PHP/Laravel/Wordpress, MySQL, HTML, CSS, and JavaScript, ensuring high performance and scalability</li><li>• Development of custom CMS Laravel applications for internal admin store operations</li><li>• Automated an event registering system by rewriting the application with modern full-stack features and reduced the number of manual data input entries and processing that needed to be done under the old system</li><li>• Website and database optimization techniques which improved load times for data intensive pages and API endpoints</li><li>• Built internal registration software, automated registration processes and created administrative tools</li></ul>   |                               |                                 |                          |

**Web Developer****Pop Creative Group***Miami, FL, USA***02/2015 - 06/2018**

- Developed several custom full stack web applications using Wordpress, Laravel, and integrating with various API services
- Refactored code, identified and replaced legacy code with modern Object Oriented techniques
- Managed project timelines and budgets, collaborating with stakeholders to ensure timely delivery of high-quality web applications that meet client requirements and exceed expectations
- Custom Magento web development, migration to Magento v2
- Developed and maintained documentation for codebases, and web applications, improving codebase readability and facilitating team collaboration

**Web Developer****Cause Populi***Remote, FL, USA***07/2012 - 02/2015**

- Developed and maintained several E-commerce websites based on WooCommerce and Magento
- Debugged and resolved complex technical issues in web applications
- Ticket support for client requests with server migrations
- Management of websites, DNS configuration and troubleshooting
- Worked with legacy PHP code bases to update and maintain existing web applications

**Education**

---

**Bachelor of Science****Florida International University***Miami, FL, USA***08/2006 - 12/2011**

- Major in Information Technology
- Minor in Mathematics
