Skills

- PHP | Laravel | Livewire | Python | Wordpress | JavaScript | jQuery | React | MySQL | TailwindCSS | Git
- GNU/Linux | Vim | Bash | Nginx | Docker | CI/CD | PHPUnit | MVC | OOP | API Development
- Microservices | Frontend | Backend | OWASP Security Principles

Experience

Full Stack Developer

U2C

Miami, FL, U.S

02/2024 - Present

- Developed a custom CMS integrated with external platforms via REST API endpoints, enabling seamless data exchange and improving operational efficiency.
- Streamlined the development process by integrating Docker containers with Laravel, enabling efficient deployment pipelines for a fully functional, scalable web application, resulting in increased productivity and reduced development costs.
- Utilized Git for version control, ensuring code stability and facilitating collaboration within containerized development environments.
- Led the complete redevelopment of multiple internal company websites, modernizing the tech stack, eliminating outdated code bases, and enhancing site security to align with best practices.

Full Stack Developer

Contractor

Miami, FL, U.S

02/2022 - 02/2024

- Designed and developed a multilingual custom CMS using Laravel and Livewire, enhancing usability and streamlining the user experience across diverse audiences.
- Customized and optimized invoice template systems within NetSuite to meet specific client requirements, improving efficiency and accuracy in financial workflows.
- Managed and maintained several e-commerce websites, ensuring seamless functionality, resolving performance issues, and enhancing user experience.
- Diagnosed and resolved critical bugs in a ticketing system, improving system reliability and minimizing downtime for client operations.

Senior Backend Engineer

Ideal Image

Remote

10/2021 - 10/2022

- Implemented scalable RESTful APIs and Dockerized background workers to manage asynchronous modules in a microservices application, ensuring portability and consistency from development to production environments.
- Streamlined the development process by integrating React and Laravel to deliver a fully functional, scalable web application in record time, resulting in increased productivity and reduced development costs
- Developed and maintained APIs using Laravel, Dockerized application components for streamlined deployment, and ensured seamless integration with external services and data sources.
- Set up Docker containers for queue workers to automate background operations, enhancing efficiency in handling high-volume tasks and reducing manual intervention.
- Optimized SQL queries and database schema within Dockerized services to improve query performance and data access times.

Full Stack Developer/Admin

NIA Auto Design

Miami, FL, USA

08/2020 - 10/2021

- Improved the maintainability and scalability of a Laravel web application by refactoring the codebase and implementing modern software design patterns, resulting in increased efficiency and reduced technical debt
- Automated and optimized business logic for core E-commerce operations in areas such as customer operations, producing invoices, checking and modifying store inventory
- Deployed web applications on Linux servers, ensuring optimal performance and security
- Managed E-commerce projects, implementing payment gateways and shopping cart functionality using popular platforms such as WooCommerce and Shopify
- Server automation/backups with Python/Bash, applied security patches on a regular basis
- Deployed web applications on Linux servers, ensuring optimal performance and security

Full Stack Developer**C&I Studios***Fort Lauderdale, FL, USA***06/2018 - 07/2020**

- Designed and developed custom web applications using PHP/Laravel/Wordpress, MySQL, HTML, CSS, and JavaScript, ensuring high performance and scalability
- Development of custom CMS Laravel applications for internal admin store operations
- Automated an event registering system by rewriting the application with modern full-stack features and reduced the number of manual data input entries and processing that needed to be done under the old system
- Website and database optimization techniques which improved load times for data intensive pages and API endpoints
- Built internal registration software, automated registration processes and created administrative tools

Web Developer**Pop Creative Group***Miami, FL, USA***02/2015 - 06/2018**

- Developed several custom full stack web applications using Wordpress, Laravel, and integrating with various API services
- Refactored code, identified and replaced legacy code with modern Object Oriented techniques
- Managed project timelines and budgets, collaborating with stakeholders to ensure timely delivery of high-quality web applications that meet client requirements and exceed expectations
- Custom Magento web development, migration to Magento v2
- Developed and maintained documentation for codebases, and web applications, improving codebase readability and facilitating team collaboration

Web Developer**Cause Populi***Remote, FL, USA***01/2012 - 02/2015**

- Developed and maintained several E-commerce websites based on WooCommerce and Magento
- Debugged and resolved complex technical issues in web applications
- Ticket support for client requests with server migrations
- Management of websites, DNS configuration and troubleshooting
- Worked with legacy PHP code bases to update and maintain existing web applications

Education

Bachelor of Science**Florida International University***Miami, FL, USA***08/2006 - 12/2011**

- Major in Information Technology
- Minor in Mathematics
